

# Delayed mode quality control of Argo float 6901121

Kamila Walicka

British National Data Centre (BODC), National Oceanography Centre  
Joseph Proudman Building, 6, Brownlow St, Liverpool L3 5DA

September 19, 2019

## Summary

The comparison between Argo float 6901121 and reference data (Argo and CTD, respectively) showed a salinity drift after cycle 200. The assessed salinity error from 1 to 199 is  $< 0.01$  and qc=1. Cycle from 200 to 285, salinity correction applies with qc 2 and error 0.02. The pressure sensor in Apex float is not truncated with a negative pressure drift, QC=1, error = 2.4 dbar.

WMO number	DM correction
6901121	No correction

# 1 Introduction

Delayed mode analysis was performed for float number 55669 (6901121) where salinity and temperature values were separately compared to nearby historical CTD profiles and nearby Argo profiles as a reference database. The OWC (Cabanès et al., 2016) method was run to estimate a salinity offset and/or a salinity drift.

For more information about float 55669 (6901121) click on the following link: <http://www.ifremer.fr/argoMonitoring/float/>

## 2 Quality Check of Argo Float Data

### 2.1 Time Series of Vertical Distribution of Data

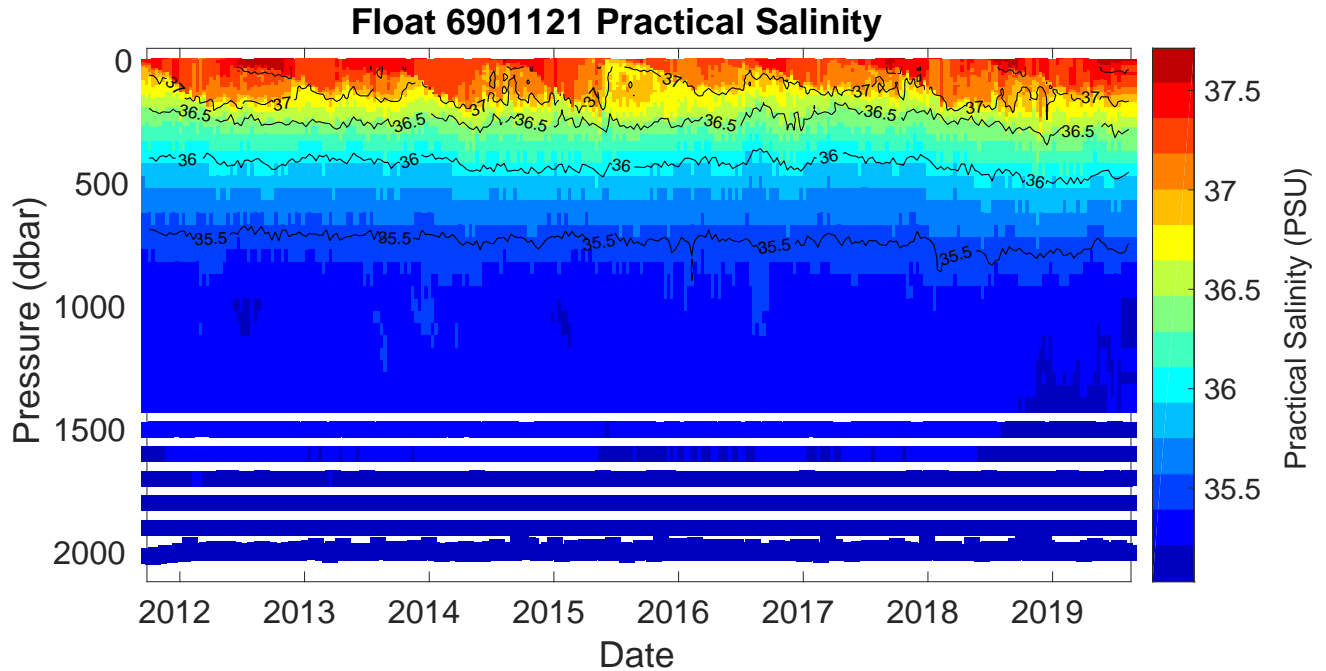

Figure 2: Float 6901121. Time series of the vertical distribution of practical salinity (PSU).

## 2.2 Comparison between Argo Float and Climatology

The comparison between float 6901121 and data from WMO boxes  $\pm 10^\circ$  of latitude and longitude shows that the Argo profiles fit within the expected ranges (Figures 3, 4 and 5). This result confirms that float 6901121 represents relatively stable and consistent with the expected physical conditions in this region.

Figure 3: Float 6901121. Float profile of potential temperature (°C) plotted with climatology from the spatial range of 10 °. The black and blue cycles indicates the first and the last Argo profile, respectively. Green symbols represent other Argo profiles.

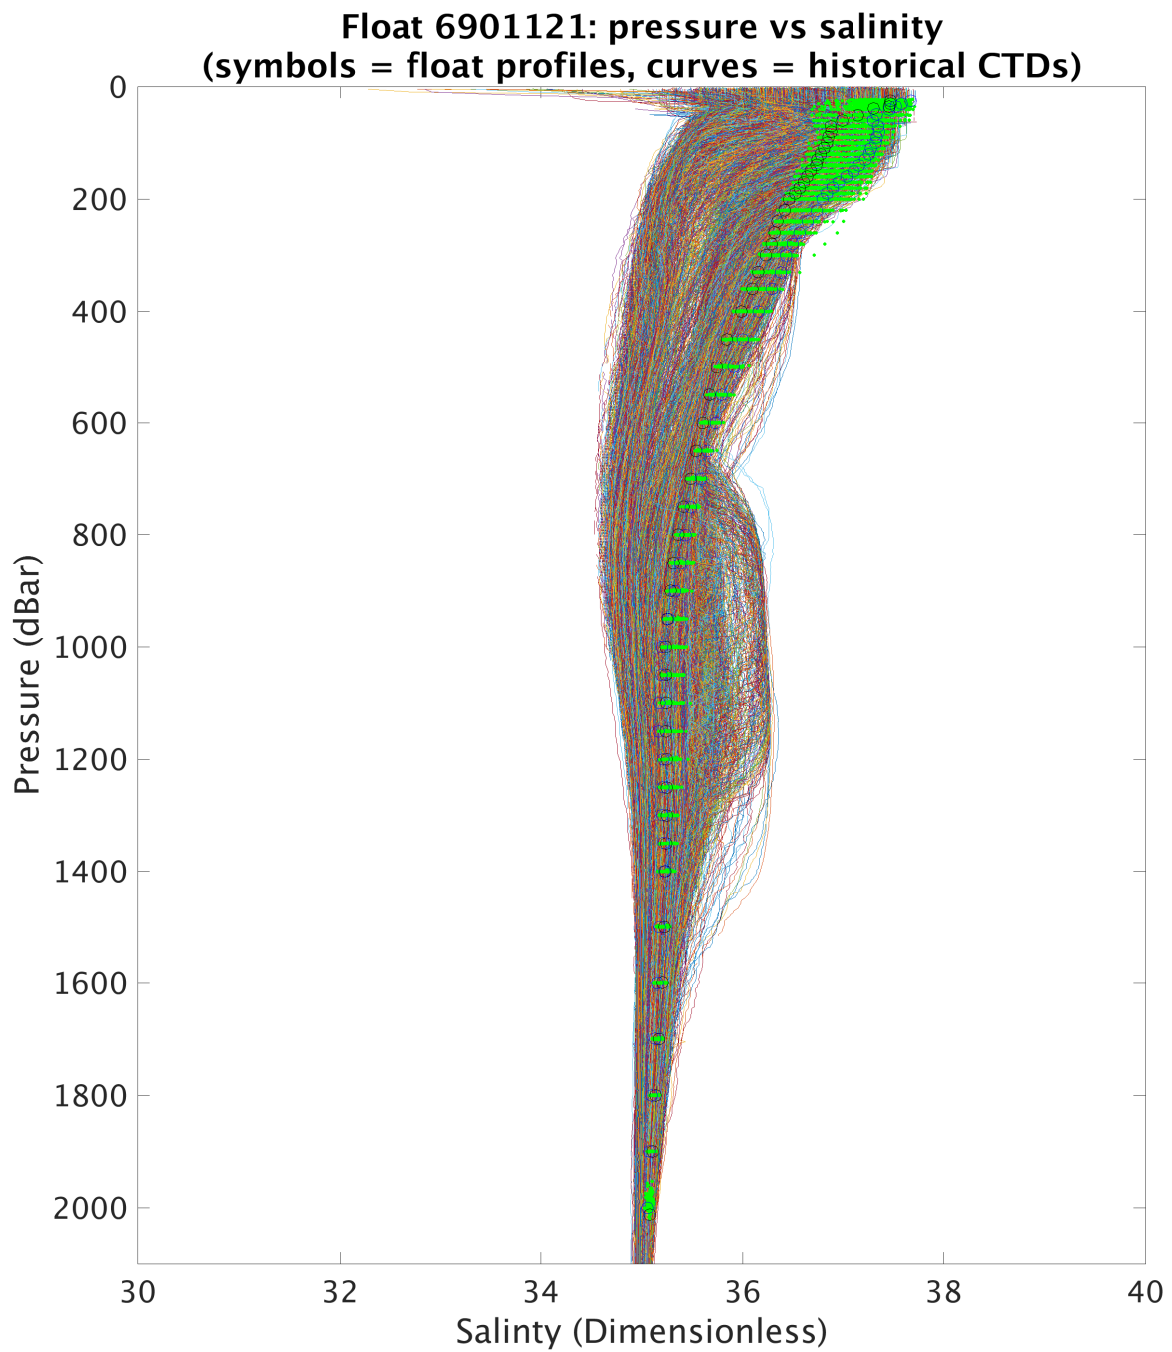

Figure 4: Float 6901121. Float profile of salinity (dimensionless) plotted with climatology from the spatial range of  $10^\circ$ . The black and blue circles indicate the first and the last Argo profile, respectively. Green symbols represent other Argo profiles.

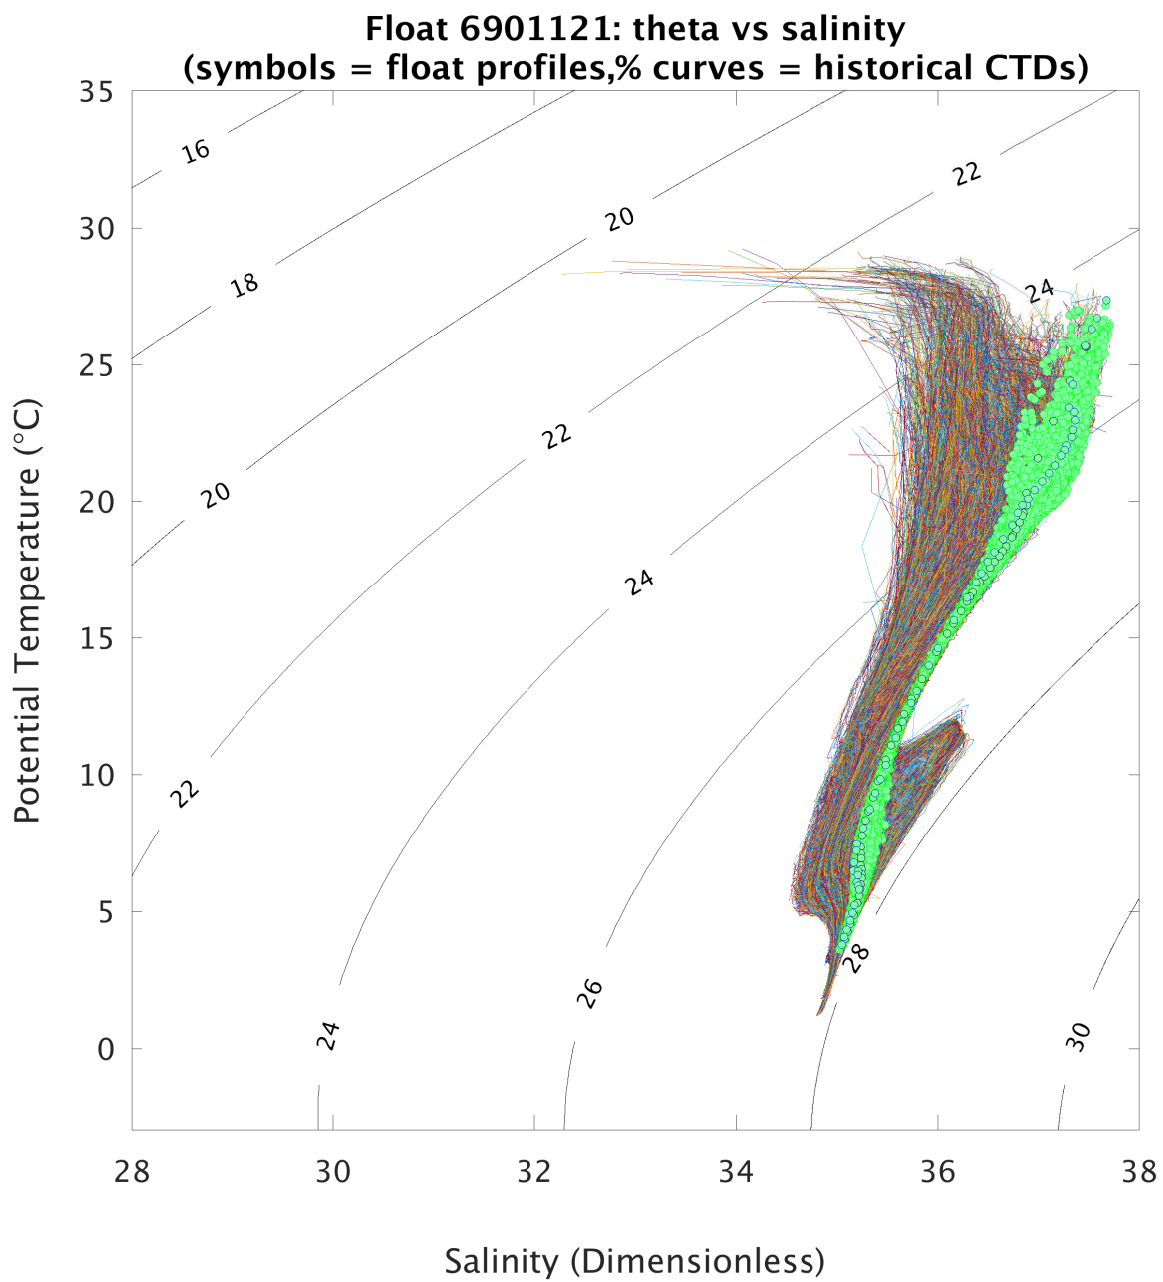

Figure 5: Float 6901121. Theta/S plotted with climatology from the spatial range of 10°. The black and blue cycles indicates the first and the last Argo profile, respectively. Green symbols represent other Argo profiles.

## 2.3 Satellite Altimeter comparison

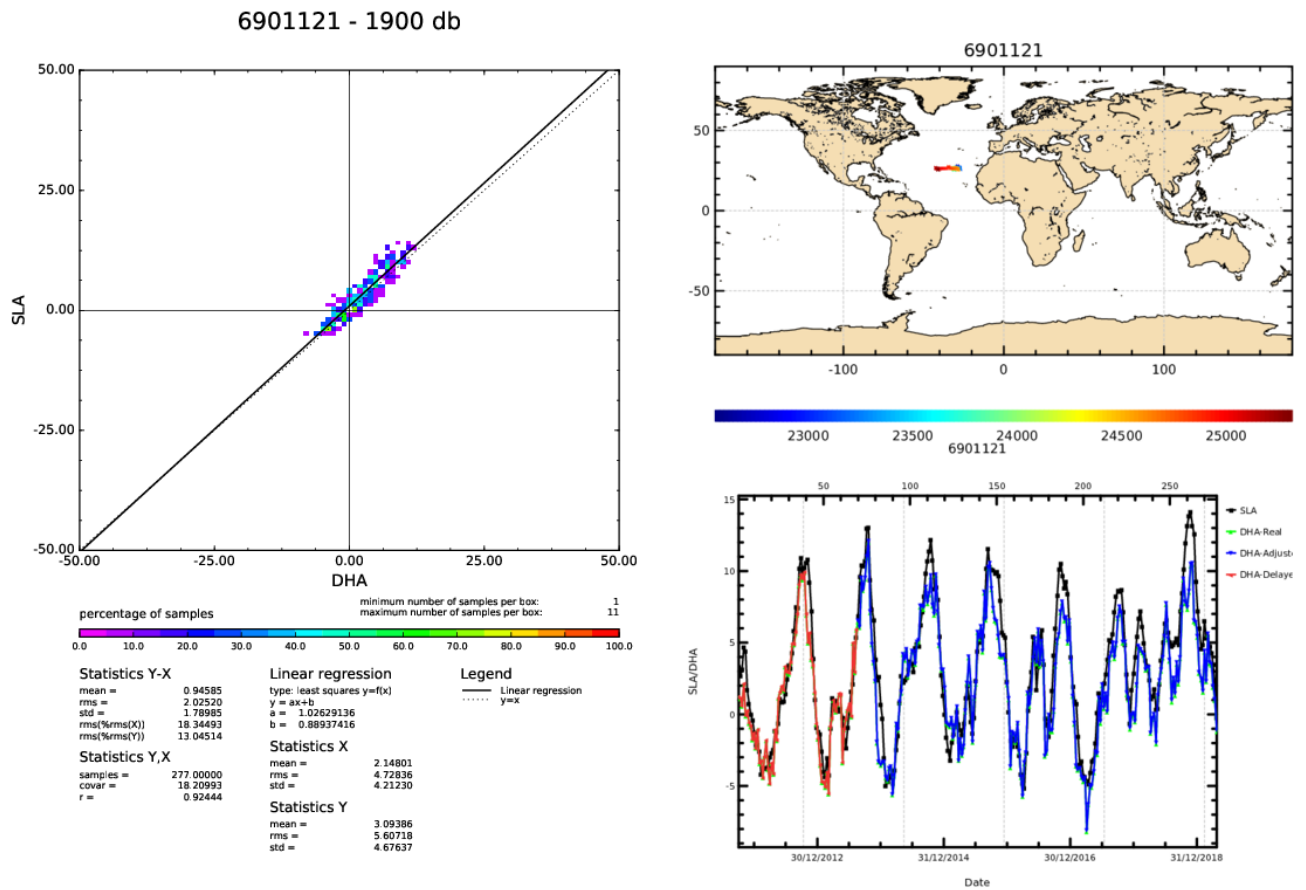

Figure 6: Float 6901121. The comparison between the Sea Surface Height (SSH) from the satellite altimetry and Dynamic Height Anomaly (DHA) extracted from the Argo float temperature and salinity data

## 3 Pressure Adjustment for APEX Floats

Float 6901121 is the Apex float, where the pressure sensor is not auto-corrected to zero while at the sea surface, hence the pressure data in Apex float have to be corrected during processing in delayed-mode. The procedures of adjusting sea surface pressure are described in Argo User's Manual, 2017

(<https://archimer.ifremer.fr/doc/00228/33951/32470.pdf>). The pressure sensor in Apex float 6901121 is not truncated, QC=1, error = 2.4 dbar (Figure 7).

Raw surface pressure measured before descent (+0 dbar offset) for float  
55669  
pressure correction in green

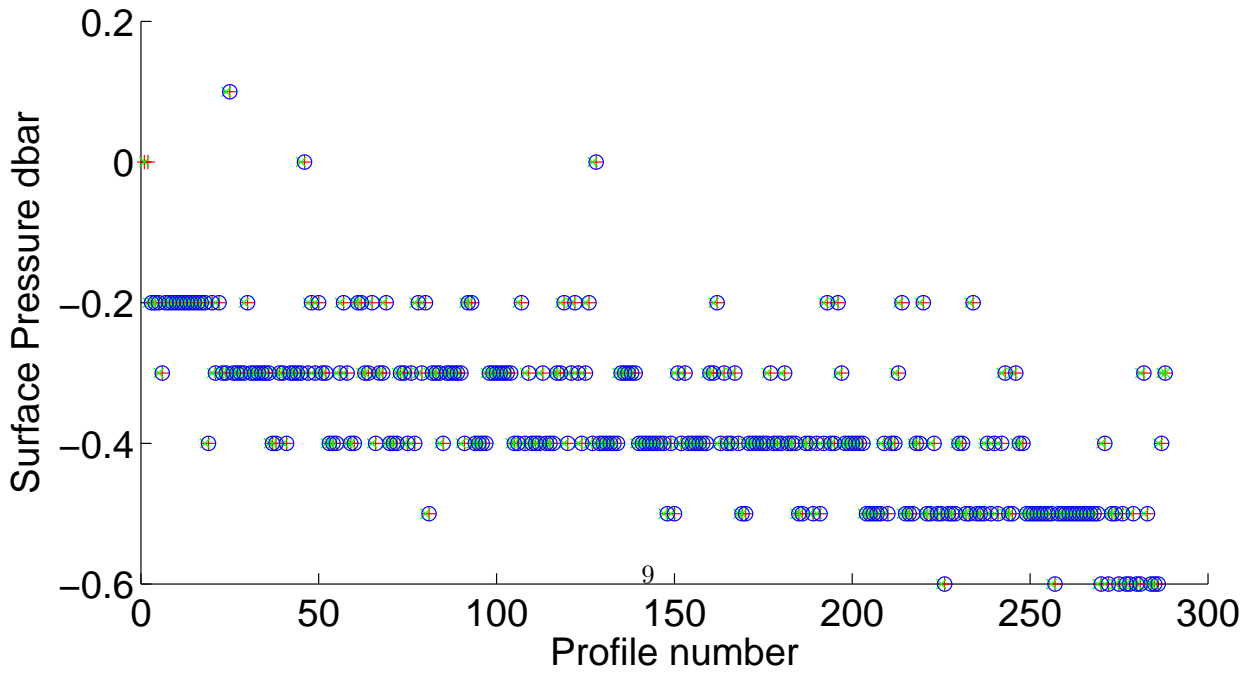

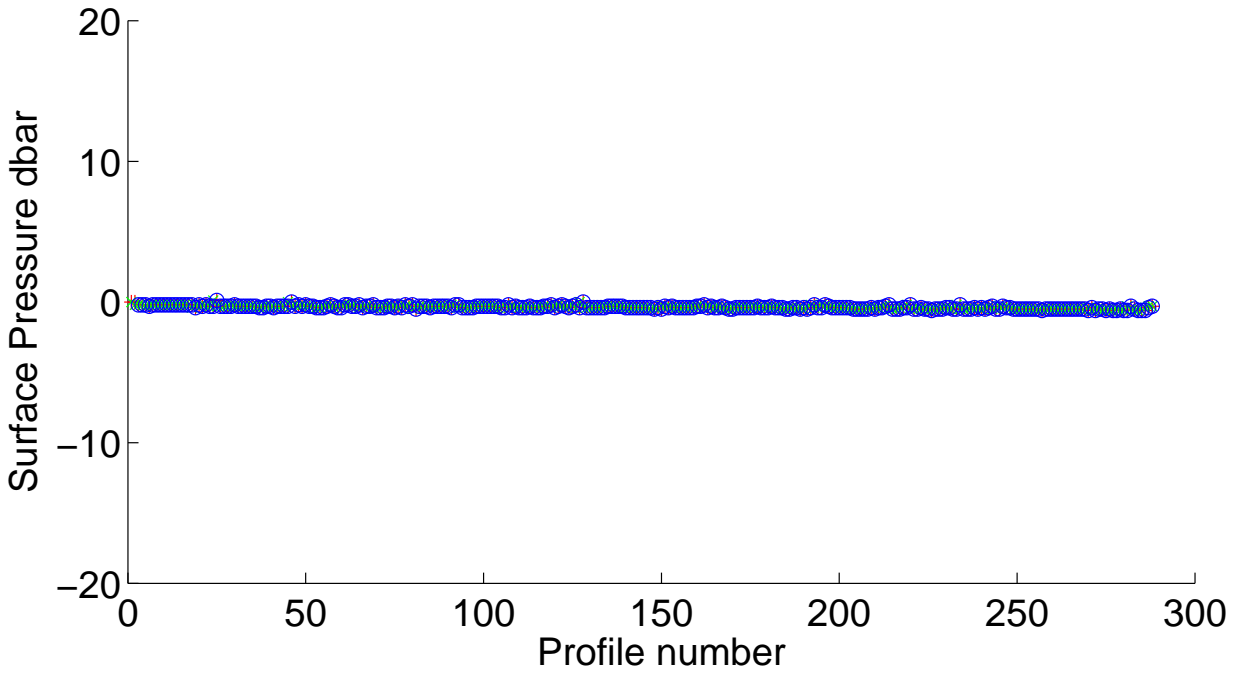

Figure 7: Float 6901121. Sea surface pressure data. The red cross indicate the raw pressure before float descent, recorded after sending data to GDAC. Blue circle indicate pressure value in the real-time. Green rotated cross shows the pressure correction applied from the previous float cycle.

### 4.3 Summary and Conclusions

The Apex float was adjusted using the sea surface pressure data. The pressure sensor is not truncated, QC=1, error=2.4 dbar. The configurations of the objective mapping parameters, set for float 6901121, were applied separately for CTD and Argo reference data. In the setcalseries we set the theta levels between 12 and 15 degrees. Data showed a salinity drift after cycle 200. The assessed salinity error from 1 to 199 is  $< 0.01$  and qc=1. Cycle from 200 to 285, salinity correction applies with QC 2 and salinity error 0.02
